Mission Statement

We're driven by the vision of a compostable waste stream becoming a reality in our lifetime, a carbon-neutral, closed loop product life-cycle beginning with agriculturally derived raw materials manufactured into disposable products, captured from the municipal waste stream, composted, and then returned to the soil as nutrients to grow more crops.

We exist to help our customers in their efforts to offset the negative environmental impacts of petroleum-based plastics by providing an ever-growing selection of products made from renewable, plant-based resources.

We're committed to making things better and saving our planet. That means working daily to help reduce the plastic trash that overflows our community landfills, clogs our nation's streams, and floats forever in the oceans.
